

Pipelining :- A way of speeding up execution of instructions. OR overlap execution of multiple instruction.

⇒ Pipelining :- is a technique of decomposing a sequential process into suboperations, with each suboperation being executed in a dedicated segments that operates concurrently with all other segments.

- Non-pipelining
    - 1 operation finish every 1ns.
- J<sub>1</sub>
- Second process can't start
- 1 ns

- Pipelining :
    - 1 operation finished every 200ps pipeline Registers
- 

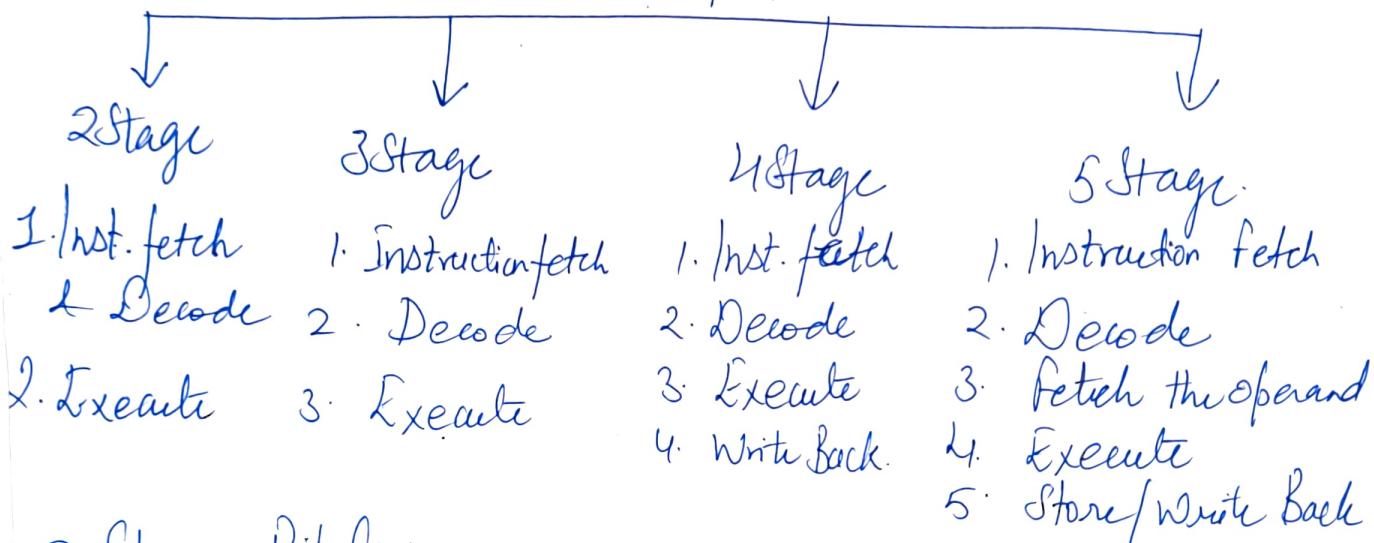

- Simultaneous execution of more than 1 instruction takes place in pipelining procedure.

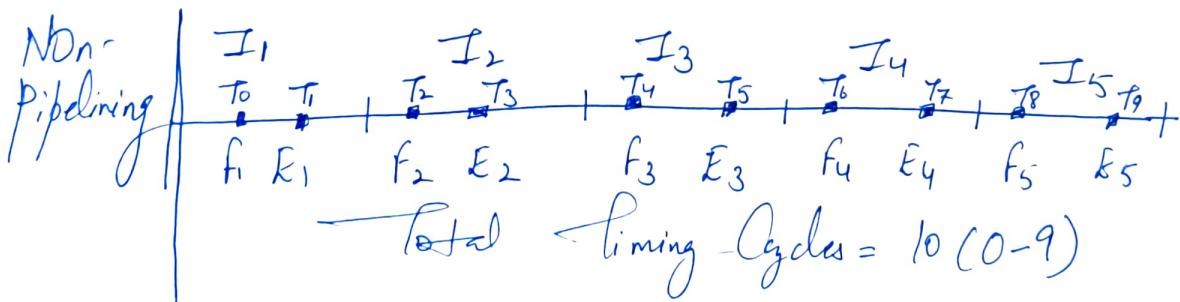

Each instruction in a computer is processed with following sequence of steps (phase)

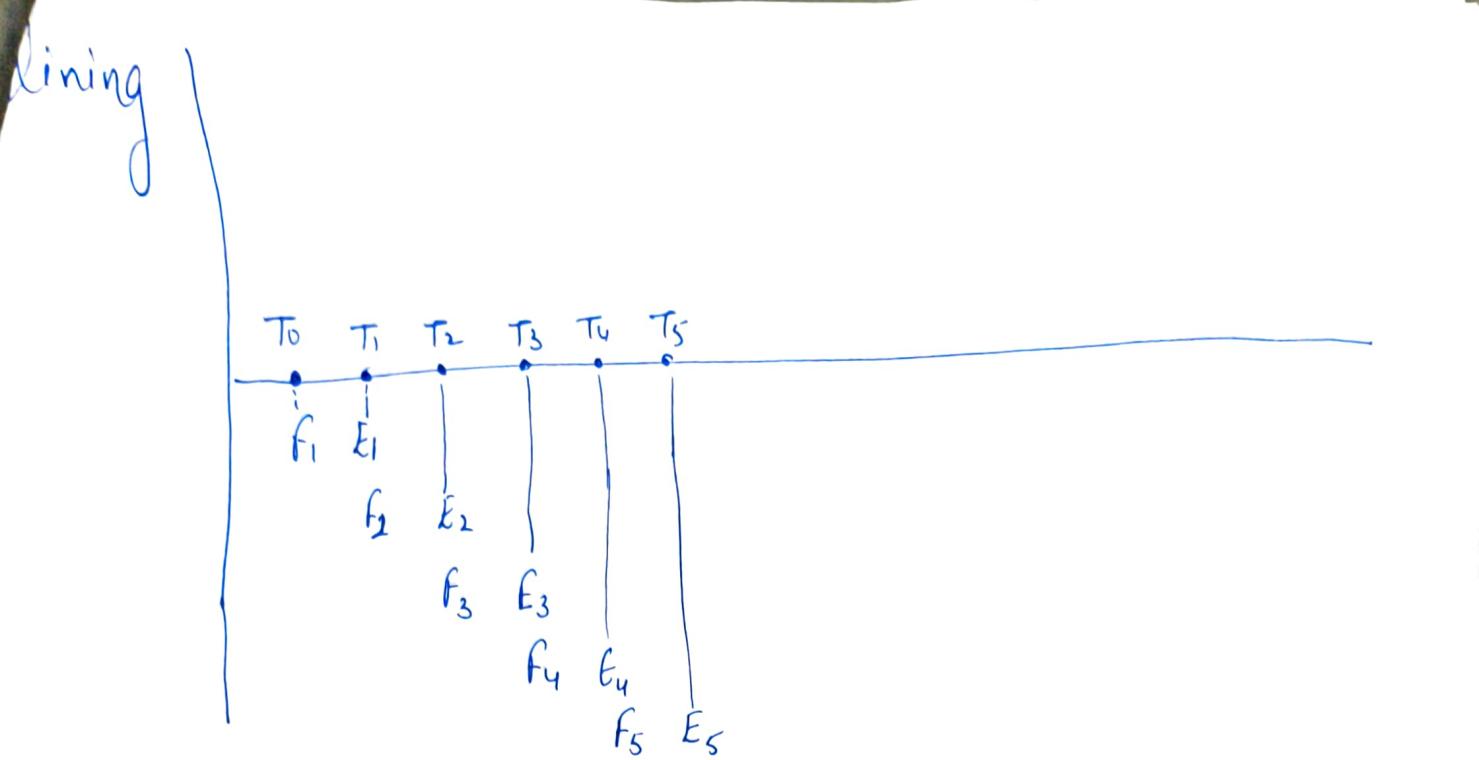

1. Fetch the instruction from memory ( $F_1$ )
2. Decode the instruction ( $D_1$ )
3. Fetch the operand from memory ( $F_2$ )
4. Execute the instruction ( $E_1$ )
5. Store the result (Write Back) in the suitable place. ( $W_B$ )

### Instruction pipeline

2 Stage Pipelining: The 2 stage pipeline CPU will break the process into Instruction fetch & Instruction decode. Suppose in a program we have 5 instructions

$\rightarrow$  Total timing Cycle = 6

formula for Calculate timing.

for Non-pipeline

$$T = N \times K$$

N: no. of instruction

K: no. of Stages

$\rightarrow$  T: Timing Cycles Required  
for 2 Stage  $K=2$ .

5 instruction =  $N=5$

$$T = 2 \times 5 = 10$$

for pipeline for 2 stages.

$$T = K + (N-1)$$

At:  
 $K=2$

$N=5$

$$T = 2 + (4) = 6$$

# Pipeline Hazards

Types 1 Data

2. Structural

3. Control

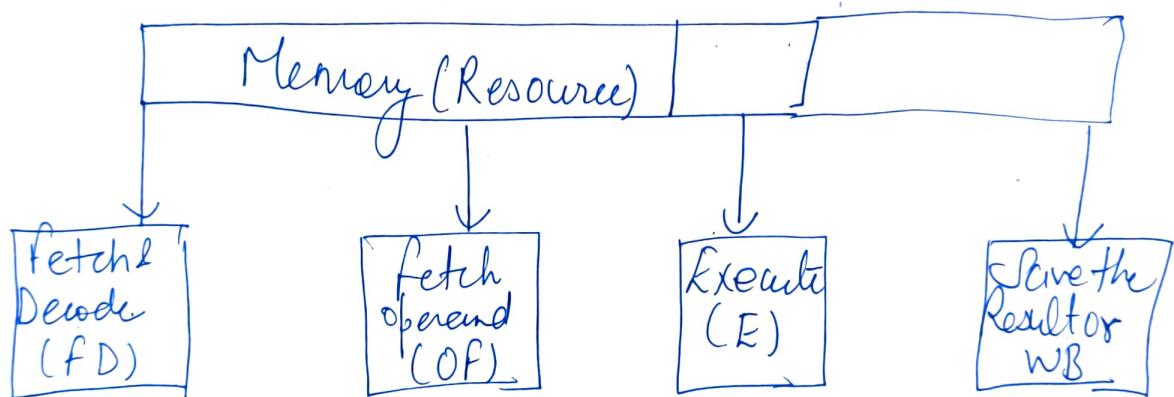

Structural: Multiple Instructions share same resources: n-stage pipeline: n-combinational

ckt. but CPU Resource Single: Memory, System Bus

ADD R<sub>1</sub>, R<sub>2</sub>

ADD R<sub>1</sub>, [2000]

e.g.

|                | 1  | 2   | 3  | 4   | 5  | 6  | 7   | 8  | 9 | 10 | 11 | 12 |
|----------------|----|-----|----|-----|----|----|-----|----|---|----|----|----|
| I <sub>1</sub> | FD | OF  | E  | WB  |    |    |     |    |   |    |    |    |
| I <sub>2</sub> |    | NOP | FD | NOP | OF | E  | WB  |    |   |    |    |    |
| I <sub>3</sub> |    |     |    |     |    | FD | NOP | OF | E | WB |    |    |
| I <sub>4</sub> |    |     |    |     |    |    |     |    |   |    |    |    |

CP I = 3 (instead of CP I = 1)

Solution: Resource Duplication (cost)

: NOP usage (efficiency).

Control Hazards: branch outcome not known.

| branch         | I <sub>1</sub> | FD | OF | E  | WB | Branch instruction if true |           |
|----------------|----------------|----|----|----|----|----------------------------|-----------|
| I <sub>2</sub> |                |    | FD | OF | E  | WB                         |           |
| I <sub>3</sub> |                |    |    | FD | OF | E                          | WB        |
| I <sub>4</sub> |                |    |    |    | FD | OF                         | E      WB |

all in seq. will get discarded

Sol: predictive Algo.

During decode phase / execute phase.

Data Hazards: dependency of 1 instruction in pipeline on data in previous instruction.

INC B

MOV A, B

|          | T <sub>1</sub> | T <sub>2</sub> | T <sub>3</sub> | T <sub>4</sub> |    |
|----------|----------------|----------------|----------------|----------------|----|
| INC B    | IF             | OF             | E              | WB             |    |
| MOV A, B |                | IF             | OF             | E              | WB |

it h-output of MOV A, B is wrong since it has not used the updated value of B obtained in INC B

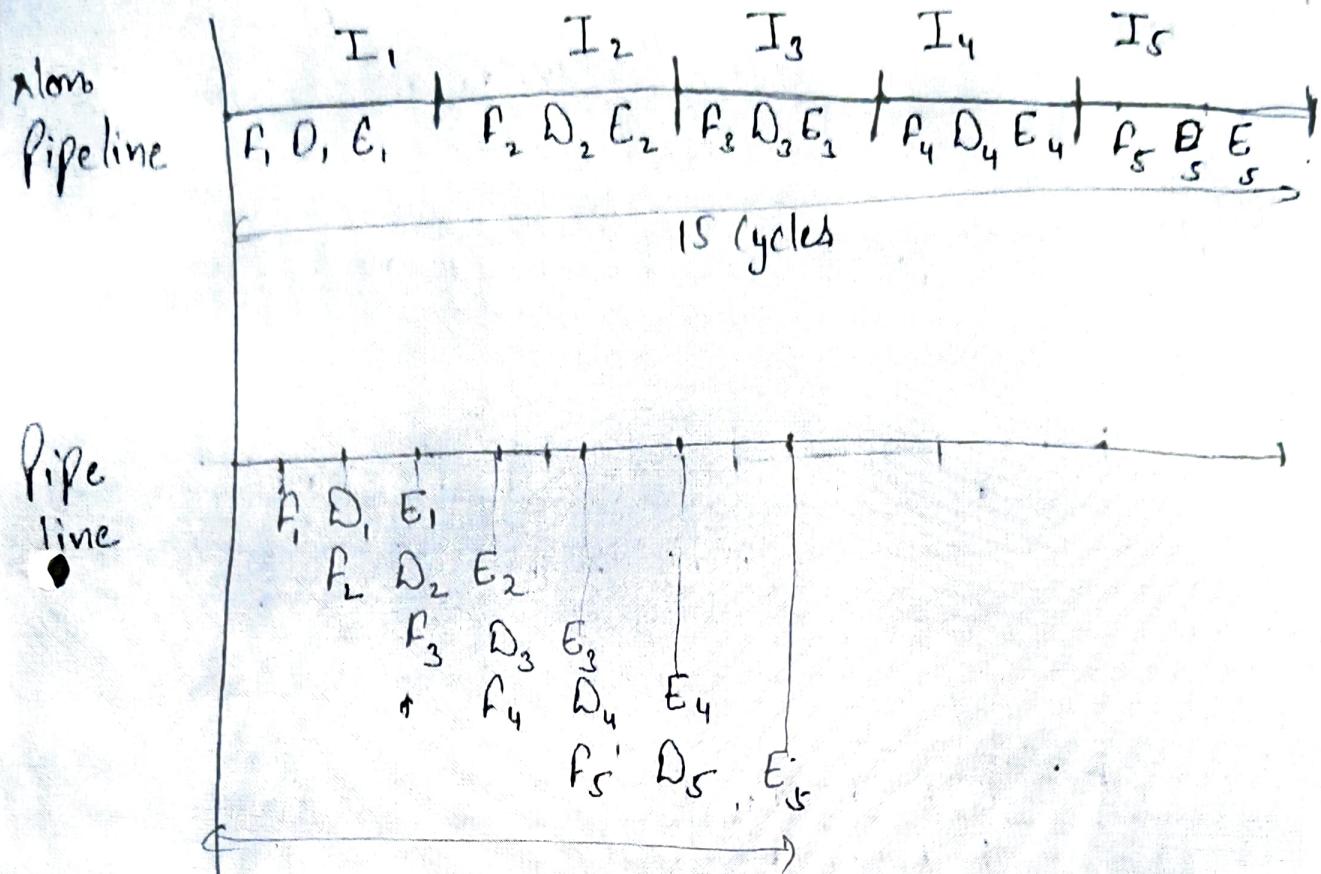

## Solution

| T <sub>1</sub> | T <sub>2</sub> | T <sub>3</sub> | T <sub>4</sub> | T <sub>5</sub> | T <sub>6</sub> | T <sub>7</sub> |
|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| INC B          | IF             | OF             | E              | WB             |                |                |
| MOV A,B        |                | NOP            | NOP            | NOP            | IF             | OF E WB        |

← → ----- ↘

CPI = 3 ?

# 3 Stage Pipeline (5 Instruction)

## Calculating Timing Cycle

For Non Pipeline

In Three Stage

$$T = k \times N$$

$$= 3 \times 5 = 15$$

15 cycles

For Pipeline

$$T = k + (N-1)$$

$$= 3 + (5-1) = 3 + 4 = 7$$

7 Cycles.

## 4 Stage Pipeline (5 Instruction )

Non  
Pipeline,

$I_1, F_1, D_1, E_1, S_1$ ,  $I_2, F_2, D_2, E_2, S_2$ ,  $I_3, F_3, D_3, E_3, S_3$ ,  $I_4, F_4, D_4, E_4, S_4$ ,  $I_5, F_5, D_5, E_5, S_5$

20 Cycles.

Pipeline

|       |       |       |       |   |   |   |
|-------|-------|-------|-------|---|---|---|
| $F_1$ | $D_1$ | $E_1$ | $S_1$ | . | . | . |
| $F_2$ | $D_2$ | $E_2$ | $S_2$ | . | . | . |
| $F_3$ | $D_3$ | $E_3$ | $S_3$ | . | . | . |
| $F_4$ | $D_4$ | $E_4$ | $S_4$ | . | . | . |
| $F_5$ | $D_5$ | $E_5$ | $S_5$ | . | . | . |

~~8~~ 8 Cycles

For Non Pipeline.

$$\begin{aligned} T &= (k \times N) \\ &= 4 \times 5 \\ &= 20 \text{ cycles} \end{aligned}$$

For Pipeline

$$\begin{aligned} T &= k + (N-1) \\ &= 4 + (5-1) \\ &= 4 + 4 = 8 \end{aligned}$$

where

$k$  = No. of Stages

$N$  = No. of Instructions

$T$  = Timing Cycles

$F_i$  = Fetch Instruction

$D_i$  = Decode
